Fulda, Germany, June 18, 2024 – The speedikon group of companies made an impressive appearance at this year's CAFM trade fair in Fulda. As a leading provider of software solutions in the fields of CAFM (Computer-Aided Facility Management), DCIM (Data Center Infrastructure Management), energy data management, photorealistic digital twins and AI applications, the German group of companies presented its latest solutions and projects while attracting numerous visitors to its fair stand.

One particular highlight was certainly the new robot dog "Floppy", which caused quite a stir among visitors to the trade fair. With its ability to record data and agile navigation, Floppy demonstrated how artificial intelligence and robotics can be used in the facility management of the future. In particular, applications such as perimeter monitoring of buildings or documenting values in areas that are dangerous or unpleasant for humans are already possible today.

In addition to the exciting live demonstrations of their software solutions, the speedikon group of companies offered visitors to the trade fair the opportunity to take part in a competition. The winner will receive an exclusive AI workshop to gain a deeper understanding of the world of artificial intelligence and its application in facility management and beyond.

"Our participation in the CAFM trade fair in Fulda was a great success," says Adrian Merkel, CEO of speedikon FM. "We are delighted that we were able to inspire so many visitors with our solutions. The robot dog in particular showed which technologies are already available today and how they can shape the future of facility management."

About speedikon FM

speedikon FM is a pioneering software company that specializes in the digitalization of technical and commercial processes within buildings, data centers, and industrial plants. Since 1997, our company has been providing not just products, solutions, and technologies, but also a comprehensive range of services that empower our customers to optimize their asset-related business operations. Our team at speedikon FM possesses extensive expertise in handling vast amounts of data, complex databases, and seamless integration with existing software and hardware solutions.
